Alerts from Microsoft Forums

akagan@sympatico.ca,

You have received the following alert from Microsoft Forums provided by Microsoft Alerts Service

msdn

There's a new post in a Forums thread you are tracking !

Re: Opening excel files in vb 2005
(LocalizeThis)Posted by **Mable** in **Visual Basic Express Edition**

You can open an Excel file and have access to the Excel object model using code like this:

```
' Start Excel and get Application object.
Dim xlApp As Excel.Application
xlApp = CType(CreateObject("Excel.Application"), Excel.Application)
 xlApp.Visible = True
'open the workbook (read only)
Dim xlWorkbook As Excel.Workbook
xlWorkbook = xlApp.Workbooks.Open(Me.txtXLWorkbook.Text, , True)
```

If you want the user to take control of the Excel interface, add one more command:

```
    xlApp.UserControl = True
```
